

Science at St Monica's School

Intent

A high-quality science education provides the foundations for understanding the world through the specific disciplines of biology, chemistry and physics. Science has changed our lives and is vital to the world's future prosperity, and all pupils should be taught essential aspects of the knowledge, methods, processes and uses of science. Through building up a body of key foundational knowledge and concepts, pupils should be encouraged to recognise the power of rational explanation and develop a sense of excitement and curiosity about natural phenomena. *National Curriculum 2014*

Implementation

During EYFS at St Monica's School

Understanding the world involves guiding children to make sense of their physical world and their community through opportunities to explore, question, observe and find out about the world around them. They develop scientific knowledge through daily play-based activities. Our discrete science curriculum in the foundation stage is taught through the main area of 'Understanding the world' and the strands 'Past and Present, People, Culture and Communities, and The Natural World.'

During Key Stage 1 at St Monica's School

Our curriculum is based on the National Curriculum and is supported by resources from White Rose and Kapow. In KS1, the curriculum provides pupils with hands on engaging lessons, covering both knowledge objectives and developing a range of 'working scientifically' skills. A range of resources are used to match pupil needs. Every lesson has two learning objectives; a knowledge and a skill. The skills developed over the key stage are:

- observing changes over a period of time
- pattern seeking
- grouping and classifying
- carrying out simple tests
- asking and answering questions

During Key Stage 2 at St Monica's School

Our curriculum is based on the National Curriculum and is supported by resources from White Rose and Kapow. In KS2, the curriculum provides opportunities to broaden pupils' scientific view of the world around them. They do this through exploring, discussing ideas and scientific investigation. Pupils develop ideas about everyday phenomena and the relationships between living things.

At upper key stage 2, they encounter more abstract ideas and begin to recognise how these ideas help them to understand and predict how the world operates. Children also begin to recognise that scientific ideas change and develop over time. Scientists who were/are experts in the field of scientific study are explicitly taught about. Students are encouraged to ask their own questions about what they observe and make decisions about which types of scientific enquiry are likely to be the best ways of answering them, including; observing changes over time, noticing patterns, grouping and classifying things, carrying out simple comparative and fair tests and finding things out using secondary sources of information. They draw conclusions based on findings and use scientific language to explain their findings.

Planning

- The school's curriculum map shows the units to be covered each term.
- There is planning for each unit of work and teacher assessment is ongoing.
- Plans are annotated and adapted to show how less able and those new to English will access the content.
- More able children are planned for so that they can deepen knowledge and skills.

Teaching

- Flexible groupings are used during lessons: ability and mixed ability groups, paired work, guided and independent work, and whole class work.
- Opportunities to develop core literacy and numeracy skills are embedded throughout lessons as well as the learning of new vocabulary.
- A range of resources are used to enhance learning: pictures, watching videos, reading information texts and practical experiments.
- Relevant vocabulary is explicitly taught, evident in the classroom and used in discussion and reasoning.
- Children receive science lesson every week and have a Science book to record work.
- Each lesson should follow a four-part structure - review, explore and enquire, challenge and, reflect and review. This will be flexible dependent upon the scientific enquiry.

Marking and feedback

Work should be marked according to the school marking policy by using:

- Peer and self-assessment
- Oral feedback
- Written feedback

Impact

St Monica's scientists:

- ask insightful questions, conduct fair experiments, and analyse evidence and results.
- approach scientific queries systematically.
- are open-minded and consider carefully why things happen the way they do.
- are receptive to new ideas and concepts.
- curious and embrace the evolving nature of scientific understanding.

Assessment

Formative:

- AFL is used within each lesson to establish next steps for pupils.
- Mini 'quizzes' take place regularly to ensure content is being learnt.

Summative:

- Each half term, the children are assessed against year group objectives.

EYFS:

- Teachers, NNEB's and teaching assistants make observations regarding the pupils' development in this subject.

Resourcing and display

Working wall:

Classroom displays are kept up to date and relevant to class themes, displaying key vocabulary and concepts that are being taught in geography.

Resources:

- Resources are stored in the science cupboard.
- Teachers are encouraged to add any new resources and store electronic copies of documents on the school staff shared area.

Monitoring

Monitoring is undertaken by the subject leader and SLT during the school year. This will include

- learning walks during science lessons.
- scrutiny of science books.
- discussions with pupils about what they have learnt.
